Protect Privacy

If you think delete means delete, think again. Just because you delete your data, doesn't mean that it's deleted from your PC hard drive! When you hit the delete button, the data still resides on your PC. It's like removing the labels from folders in a filing cabinet the information still exists but is not prominently displayed. Electronic data including email has completely transformed communications these days whereby almost everyone, business and home PC users alike, store critical data on their PCs.

The PC Data

What happens to this data when it's time to get rid of your PC? The old PC and all of the data on it end up in other people's possession whether your PC is being donated, recycled or transferred another user. How important is it to keep your data from being placed in the hands of unknown users? Consider all of the data that is stored on your PC and YOU decide:

- Financial data
- Email
- Internet History
- Personal documents
- Sales contact information
- Product development plans
- Marketing plans
- Trade secrets

Data Security Solution

Keep your data secure! Data Erasure Solution enables you to easily, quickly and permanently delete all of the personal, confidential and critical data on your hard drive. It permanently deletes the information by actually overwriting all of the data on your hard drive - never to be recovered - so you can feel confident that sensitive information is completely eliminated. It's fast, flexible, easy to use, and best of all, Data Erase Solution helps you maintain control of your confidential information.

Who and Why Use Data Erasure Solution

- If you are in a security conscious environment and need to prevent inadvertent access to data
- A computer IT professional for a company that erases employee PCs for replacement or transfer of use
- A computer service, repair technician that replaces drives for customers with hardware problems
- If you are re-using or returning a leased PC
- If you are recycling, donating or transferring PCs to other users
- A leasing or recycling center that recycles hard disk drives from one computer to another
- A used PC reseller or auction site that needs to delete all data from donated hard drives prior to resale
- An asset management or disposal company

Hard Drive Degauss and Tape Disposal Services

Kava has over 10 years of experience providing secure and reliable Hard Drive degauss, data destruction, and tape disposal services. With the numerous regulations that now surround the use, security, and storage of data, companies must be extremely careful, and highly proactive, in how they dispose of data after it is no longer needed.

Not all Hard Drive degauss, data destruction, and media disposal services are forthright about their processes and procedures for data destruction. Some companies offer data destruction by destroying the media, but this does not erase the data on the media. Some services claim to overwrite the data so it is unreadable, but then only rewrite part of the media. And others use degaussing equipment that is not strong enough to erase data on today's high-density media. IT managers should exercise caution and extreme care when evaluating suppliers for Hard Drive degauss.

Trusted by the largest Corporate in the HK, Kava offers several highly reliable methods for your confidential data destruction, and safe and environmentally sound methods for disposal of any Media.

100% Degaussing Media and Tape Disposal.

Depending on customer requirements, Kava can inventory, pull, and audit any tapes on a client site ready for degauss. Kava can provide completely secure transport to the Operations Center, where an additional audit is conducted for verification purposes to insure all Media have been accounted for and matches the audit list at your location.

Kava provides data degauss services for non-servo media, by utilizing a degausser rated at 7000 Oersteds (two times the normal recommended strength) to erase all data from every media.

After data degauss, media can be disposed of in an environmentally sound manner, and a Certificate of Destruction can be supplied to the customer for the media destroyed.

On-site or Off-site Disposal Services

When your organization requires off-site disposal services, Kava has the knowledge, resources and experience to meet your needs. Off-site disposal services are conducted at the highly secure Operations Center. When disposal services are conducted, you can depend on Kava to handle your sensitive data with the utmost care, following strict processing guidelines. As the preferred vendor for many of the largest Corporate in the HK, you can rest assured that Kava will complete your project in a timely and reliable manner.

Secure Degauss DoD Compliance

Kava is currently the ONLY SAS 70 certified Datacenter service provider. The American Institute of Certified Public Accountants Statement on Auditing Standards 70 (SAS 70) defines professional standards used by an auditor to assess the internal controls of a service provider, such as Media Recovery.

The SAS 70 certification assures our clients that our data eradication services meet or exceed these stringent standards. This certification recognizes that Kava follows a tested methodology for the eradication of data from media tapes.

What SAS 70 really means for you:

Peace of Mind: Kava's data Secure Degauss services are executed with the controls required to ensure total data erasure, so you can have complete confidence that your confidential data has been totally eliminated and cannot ever fall into the wrong hands or be misused.

Reduced costs and headaches: Using Kava's Secure degauss DoD services will save your internal team from undertaking the time-consuming eradication process — and you the headaches of verifying the process controls are in place and followed — to ensure reliable completion.
